Special Instructions

Fictional DCS training exercise

training-session · Revision 4

Training Squadron

Effective 2026-09-18T20:00:00+00:00 to 2026-09-18T23:00:00+00:00

Contents

Part I Mission-period instructions

Part II Changes to standing instructions

Part III Standing instructions

1 General

2 Communications

3 Airspace control

3.2 Restrictions

4 Airfield procedures

4.1 NORTH FIELD

Appendix 1 Report example

Part I Mission-period instructions

1 This part applies only to the effective mission period. The standing baseline remains a separate reusable source document.

Part II Changes to standing instructions

1 The check-in procedure in Part III, Paragraph 2.1 is replaced for this mission period.

Part III Standing instructions

1 General

1.1 Purpose. These fictional instructions demonstrate a numbered SPINS publication. They are not real-world flight procedures.

1.2 Applicability. These standing instructions apply to the exercise participants. Mission-period changes identify the baseline revision they amend.

Note 1. *Paragraph numbers and cross-references update automatically when instructions are inserted, moved, or removed.*

2 Communications

2.1 Initial check-in. Check in with MAGIC before entering the exercise area. Use the agency and channel shown in Table 1. State callsign, position, altitude, and mission number.

Table 1. Exercise communications

Agency	Frequency	Purpose
MAGIC	254.000 MHz AM	Exercise control
NORTH TOWER	250.000 MHz AM	Local airfield coordination

2.2 Reports. Report the change in status using the published call sequence.

2.2.1 Use the assigned mission number when identifying the task.

2.2.1.1 If a report requires clarification, retain the original report context.

2.2.1.1.1 Clearly identify the corrected item.

2.2.1.1.1.1 A correction does not change unrelated instructions.

3 Airspace control

3.1 Published measures. Use the measures in Reference 1. The following schematic demonstrates a figure embedded in the publication.

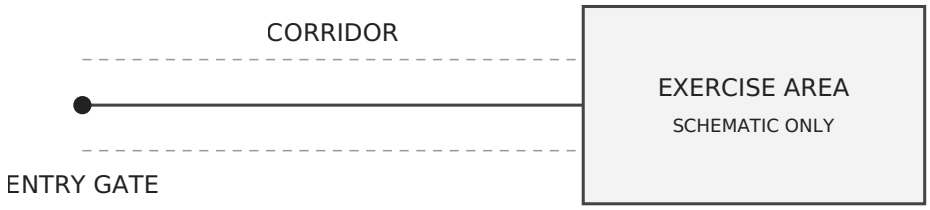

Figure 1. Illustrative control-measure schematic; not a navigation chart

3.2 Restrictions

3.2.1 Area entry. Obtain exercise-control clearance before entering an area for which clearance is required. Apply the exceptions and limitations in the assigned mission briefing.

3.2.2

1. Identify the requested area and intended activity.
2. Read back the clearance and its limits.
3. Report clear of the area when the assigned activity is complete.

Table 2. Patrol stations from the shared typed data source

Station	Floor (ft MSL)	Ceiling (ft MSL)	Control
ANCHOR 1	20000	28000	MAGIC
ANCHOR 2	20000	28000	MAGIC
CAP HIGH	28000	35000	MAGIC

4 Airfield procedures

4.1 NORTH FIELD

4.1.1 Departure. Follow local control instructions and the departure route assigned in the flight briefing.

4.1.2 Entry into controlled exercise airspace. Local departure clearance does not replace the area-entry procedure in Part III, Paragraph 3.2.1.

4.1.3 Recovery. Coordinate the arrival with local control. Use the recovery and alternate instructions in the flight briefing.

Appendix 1 Report example

Note 2. EXAMPLE. This appendix demonstrates automatically lettered list items.

1

1. Callsign and mission identification.
2. Current position and status.
3. Requested coordination.
